

## Technical Due Diligence Prep

Krijn van der Raadt

**The Max Exit Method increases valuation and the chance of a successful exit by helping the sell-side technical team prepare for due diligence**

Don't let your acquisition or investment fall through at the last moment, or distract your product development team with unnecessary fire drills - Give your technical / product team the chance to prepare:

- Crash-course on technical due diligence
- Technology- and team assessment
- Roadmap to address opportunities for improvement
- Simulate due diligence scenarios
- Creating your team's story
- Turning your team's story into a deck for the buy-side team
- Collecting and creating documentation for common requests
- Designing the data room structure
- Coaching and support throughout the process
